

SEO & Website Performance Audit

Gianni's Italian Restaurant · Belconnen, Canberra ACT
<https://giannisitalian.com.au/>

AUDIT SCOPE

■ Technical	■ Content	■ SEO	■ Performance
-------------	-----------	-------	---------------

KEY METRICS

Mobile Performance	59 / 100
Desktop Performance	68 / 100
Accessibility (Mobile)	77 / 100
Core Web Vitals	Failed

Executive Summary

This report presents the findings of an SEO and website performance audit conducted on giannisitalian.com.au in March 2026. Gianni's Italian is a newly opened restaurant in Belconnen, Canberra with strong media coverage and brand identity. However, the website currently underperforms across four dimensions: technical integrity, content depth, local SEO, and page performance.

Five issues were identified, ranging from urgent technical fixes to medium-term content strategy improvements. Most can be resolved with minimal effort and are expected to significantly improve both search visibility and user experience.

Category	Issues Found	Priority
■ Technical	2 issues	Urgent / Medium
■ Content	2 issues	High / Medium
■ SEO	1 issue	High
■ Performance	Mobile 59 · Desktop 68	High

PERFORMANCE ANALYSIS

Mobile vs Desktop

Both mobile and desktop fail Google's Core Web Vitals assessment. Mobile performance is significantly worse, with a Speed Index of 14.7s — meaning users wait nearly 15 seconds to see a fully loaded page. This is primarily caused by unoptimised large images.

This level of performance is likely to negatively impact both search rankings and user experience, particularly on mobile. Addressing performance issues should be prioritised as it directly affects visibility and engagement.

Metric	■ Mobile	■ Desktop	Target
Performance Score	59	68	90+
Accessibility	77	86	90+
Best Practices	73	73	90+
SEO Score	77	77	90+
LCP (Largest Contentful Paint)	5.3s	4.4s	< 2.5s
FCP (First Contentful Paint)	3.1s	0.7s	< 1.8s
TTFB (Time to First Byte)	2.2s	1.9s	< 0.8s
Speed Index	14.7s	7.2s	< 3.4s

Issues & Recommendations

01 ■ **Technical** WordPress Demo Content in Side Area

The Side Area panel contains placeholder data from the Qode theme demo import — a fake Italian address and Polish phone number. This is rendered in the HTML and indexed by Google.

Impact: Conflicting location data undermines Google's confidence in the business's local signals, reducing visibility in Google Maps and local search results.

→ *Update the Side Area content in WordPress to reflect accurate business details. Est. 10 min.*

02 ■ **Content** Insufficient Homepage Content

The homepage contains fewer than 50 words of body text. Google cannot determine page relevance without sufficient content, resulting in poor rankings for key local terms.

Impact: Without sufficient content, search engines cannot determine relevance, significantly limiting organic visibility.

→ *Develop homepage content of 300+ words covering brand story, signature dishes, location and trading hours. Est. 2–3 hrs.*

03 ■ **SEO** Missing Local SEO Keywords

The site ranks for very few local search terms. Customers searching 'Italian restaurant Belconnen' or 'gelato Canberra' are unlikely to discover this business.

Impact: Without targeted local keywords, the site misses high-intent searches from nearby customers actively looking for dining options.

→ *Integrate target local keywords into headings, body content, and metadata to improve relevance and ranking potential. Est. 1 hr.*

04 ■ **Content + SEO** Menu Published as PDF Only

The full menu exists only as a PDF file. PDF content is poorly indexed by Google, meaning all menu items are effectively invisible to search engines.

Impact: A missed opportunity to rank for food and dish-specific searches that drive high-intent traffic from users actively choosing a restaurant.

→ *Convert the menu to an HTML page to enable full indexing. Retain PDF as a downloadable option. Est. half day.*

05 ■ Technical Footer Navigation Links Non-Functional

Footer links for About Us, Contact, and Terms of Use all use href='#', returning users to the top of the page rather than dedicated content.

Impact: Broken navigation reduces user trust and signals an incomplete site structure to search engines, potentially affecting crawl quality.

→ Create dedicated pages for each link, or remove them until content is ready. Est. 30 min.

NEXT STEPS

Priority Matrix

Priority	Issue	Category	Effort	Business Impact
Urgent	Fix WordPress demo content	■ Technical	10 min	Local SEO & Maps
High	Add homepage content (300+ words)	■ Content	2–3 hrs	Organic visibility
High	Incorporate local SEO keywords	■ SEO	1 hr	Keyword ranking
Medium	Fix footer navigation links	■ Technical	30 min	UX & crawl quality
Medium	Convert menu to HTML page	■ Content + SEO	Half day	Food search ranking
Medium	Optimise images for load speed	■ Performance	1–2 hrs	Performance score

EXPECTED OUTCOMES

If Recommendations Are Implemented

- Improve mobile performance score from 59 → 80+
- Increase rankings for high-intent local keywords (e.g. 'Italian restaurant Belconnen')
- Strengthen local SEO signals for improved Google Maps visibility
- Reduce bounce rate through improved navigation and load speed
- Increase organic traffic and user engagement
