

FLORA HE

ACT | Flora.shuohe@gmail.com | <https://github.com/florash> | [portfolio](#)

PROFILE

Front-End Developer with a Bachelor of Information Technology from Macquarie University and a Master of Engineering Management from UTS. Experienced in developing, maintaining and deploying production web and mobile applications using JavaScript, TypeScript, React, HTML and CSS, with practical experience in reusable components, application state, responsive interfaces and accessibility.

Comfortable working within established design systems and engineering standards, integrating REST APIs, writing automated tests, and using structured code validation and quality checks in production applications. Regularly use ChatGPT, OpenAI Codex and Claude Code throughout the development process while independently reviewing outputs and maintaining responsibility for implementation quality and production results.

PROFESSIONAL SKILLS

Front-end development: JavaScript, TypeScript, React, Vite, HTML5, CSS3, responsive design, application state and reusable component-based interfaces

API and application integration: REST API integration, authentication workflows, database-connected applications, third-party services, asynchronous requests and error handling

AI-assisted software development: ChatGPT, OpenAI Codex and Claude Code for feature implementation, debugging, refactoring, test generation and technical validation; supplementary use of Gemini for research and cross-checking

Testing and quality assurance: Automated tests using mocked API responses, TypeScript checks, linting, debugging, regression checks, production build verification and structured QA workflows

Accessibility and UI systems: WCAG 2.1 AA principles, semantic HTML, colour contrast, responsive layouts, adjustable typography, design tokens and reusable components

Web performance: Google PageSpeed Insights, image optimisation, WebP conversion, responsive performance improvements and basic SEO practices

Deployment and platforms: Cloudflare Workers, Supabase, Vercel, Render, Capacitor, Apple App Store deployment and production application maintenance

CMS and content management: Shopify, WordPress, WooCommerce, Liquid templates and structured digital content workflows

Project collaboration: Requirements clarification, stakeholder communication, milestone tracking, iterative delivery, technical documentation, Git, Asana and Slack

WORK EXPERIENCE

Founder / Web Developer— 2600 Design

Canberra, ACT | 2025–Present

- Independently design, develop, test, deploy and maintain published web and mobile products used by more than 100 users worldwide, covering interface design, front-end implementation, API integrations, debugging and ongoing product improvement.
- Currently developing True Pathway, an online education platform for Australian Year 11 and Year 12 students using React, TypeScript, Vite and Cloudflare Workers.
- Build and validate reusable interface components for courses, lessons, quizzes, flashcards and AI-assisted student support, using ChatGPT, OpenAI Codex and Claude Code for implementation, debugging, test generation and code validation across desktop and mobile.
- Integrate authentication, application data and AI-powered features, including request handling, usage limits, error states and user-facing feedback.
- Built and published PTEScore, an AI-assisted speech-scoring platform with live web and iOS versions, used by nearly 100 users worldwide.
- Developed IELTSync, a bilingual IELTS preparation platform with a live web version and mobile app in TestFlight beta, including mock-test infrastructure, score reports and bilingual feedback workflows.
- Improve digital experiences through accessibility reviews, responsive interface updates, colour-contrast improvements, adjustable font sizing, testing, performance checks and production debugging.

Web Developer — K2L

Canberra, ACT | 2021–2023

- Maintained and updated client websites within CMS platforms, including content edits, image and media updates, new page builds and layout or styling adjustments.
- Wrote front-end code using HTML, CSS and JavaScript to implement new pages, interface changes and website enhancements according to project requirements.
- Worked within existing templates, CMS structures and design systems to maintain visual, technical and content consistency.
- Clarified website update requirements with stakeholders, delivered requested changes and resolved website maintenance issues.
- Checked page content, layout and functionality before release to reduce errors and maintain publishing quality.

Developer / Project Coordinator — ACS Work Integrated Learning Program

Remote / Canberra, ACT | 2021

- Worked as the developer in a seven-person team delivering a functional web application prototype.
- Took the lead on building and integrating the front-end interface.
- Collaborated with team members to translate requirements and mentor feedback into iterative application improvements.
- Used Asana and Slack to coordinate tasks, milestones, deadlines and implementation changes.
- Prepared meeting agendas, maintained project documentation and supported communication across the project team.

KEY PROJECTS

True Pathway — Online Education Platform truepathway.com.au

Developing a responsive education platform for Australian Year 11 and Year 12 students using React, TypeScript, Vite and Cloudflare Workers. Includes structured courses, lessons, quizzes, flashcards and AI-assisted student support, with reusable interface components, authentication, API integrations, responsive layouts, accessibility requirements, automated testing, build checks and pre-release validation. ChatGPT, OpenAI Codex and Claude Code are used directly in the development of quiz and flashcard features, including implementation, debugging, refactoring, test generation and technical validation.

PTEScore — ptescore.com.au

Built and maintained a production speech-scoring platform with live web and iOS versions, used by nearly 100 users worldwide. Developed responsive interfaces, authentication and user-access workflows, structured score reports, speech-recognition features, text-to-speech services, application data handling and ongoing production improvements.

IELTSync — ieltsync.com.au

Developed a bilingual IELTS preparation platform with a live web version and mobile app in TestFlight beta, including mock-test infrastructure, score reports, bilingual feedback, structured learning content and scalable content workflows across desktop and mobile experiences.

Student Support Service Portal

Developed an accessible React-based service portal using WCAG 2.1 AA principles. Applied clear user journeys, structured information architecture, semantic interface patterns, responsive layouts and reusable components for a public-service-style digital experience.

Stockwise — Full-Stack Stock Analysis Application

Developed a stock-analysis application using React and Vite on the front end and Python FastAPI on the back end. Integrated market-data services to support stock information, watchlists, price charts, ETF screening and financial news. Deployed using Vercel and Render.

EDUCATION

Master of Engineering Management — University of Technology Sydney

Bachelor of Information Technology — Macquarie University

ADDITIONAL INFORMATION

- Australian Permanent Resident with unrestricted ongoing work rights
- Based in Canberra, ACT; open to Sydney-based roles
- Referees available upon request
